

Breast Augmentation Survey Results

ImplantInfo.com® by Nicole brings you the results of a survey of over 4000 women with breast implants. Over 177 questions were answered by those surveyed.*

“... Nearly 70% of breast augmentation patients considered the procedure for a year or more before surgery and more than half (54%) for over 3 years.”

*The survey was funded by the Aesthetic Surgery Education and Research Foundation (ASERF) and developed by ASERF with the help of ImplantInfo.com by Nicole. The survey was hosted at www.implantinfo.com® for 6 months and the data were then analyzed by Data Harbor (Chicago, IL). Most of the results were published in the March/April issue of the Aesthetic Surgery Journal, the Official Publication of the American Society for Aesthetic Plastic Surgeons (ASAPS).
